The listing of claims below will replace prior versions of claims in the application:

1. (Original) A method comprising:

detecting a printer error;

if the printer error has occurred a predetermined number of times within a predetermined time period, generating an error message; and

if the printer error has not occurred a predetermined number of times within the predetermined time period, rebooting the printer.

2. (Original) A method as recited in claim 1 further comprising if the printer error has occurred a predetermined number of consecutive times, generating an error message.

3. (Original) A method as recited in claim 1 further comprising if the printer error has occurred a predetermined number of times within the predetermined time period, notifying a network administrator of the printer errors.

4. (Currently Amended) A method as recited in claim 8 [[1]] wherein logging the printer error in an error log includes recording a date and time that the printer error occurred.

5. (Currently Amended) A method as recited in claim 8 [[1]] wherein logging the printer error in an error log includes recording an identification of the print job being handled when the printer error occurred.

2

6. (Currently Amended) A method as recited in claim 8 [[1]] wherein logging the printer error in an error log includes recording an error type associated with the printer error.

7. (Original) A method as recited in claim 1 wherein rebooting the printer further includes identifying a print job that was printing during the detected printer error and attempting to reprint the identified print job.

8. (Original) A method as recited in claim 1 further comprising logging the printer error in an error log.

9. (Original) A method comprising:

detecting a printer error;

logging the printer error in an error log;

if the printer error has occurred a predetermined number of consecutive times, generating an error message; and

if the printer error has not occurred a predetermined number of consecutive times, rebooting the printer.

10. (Original) A method as recited in claim 9 further comprising if the printer error has occurred a predetermined number of times within a predetermined time period, generating an error message.

11. (Original) A method as recited in claim 9 further comprising if the printer error has occurred a predetermined number of consecutive times, notifying a network administrator of the printer errors.

12. (Original) A method as recited in claim 9 wherein rebooting the printer further includes identifying a print job that was printing during the detected printer error and attempting to reprint the identified print job.

13. (Previously Presented) A method comprising:

detecting a printer error;

adding X points to a printer error counter;

adding Y points to the printer error counter if the same printer error occurred within a predetermined time period;

determining whether the printer error counter exceeds a threshold value; and

rebooting the printer if the printer error counter does not exceed the threshold value.

14. (Original) A method as recited in claim 13 further comprising notifying a network administrator of the printer errors if the printer error counter exceeds the threshold value.

15. (Original) A method as recited in claim 13 wherein rebooting the printer includes identifying a print job that was printing when the printer error was detected and attempting to reprint the identified print job.

Application No. 10/002,003

16. (Original) A method as recited in claim 13 wherein the value of X varies depending on the type of printer error detected.

17. (Original) A method as recited in claim 13 wherein the value of Y varies depending on the type of printer error detected.

18. (Original) A printer comprising:

a control panel configured to display information to a user of the printer;

an error log configured to store information regarding printer errors detected by the printer;

an error analysis module configured to analyze printer errors stored in the error log; and

wherein the error analysis module is further configured to reboot the printer if a particular printer error has not occurred a predetermined number of times within a predetermined time period.

19. (Original) A printer as recited in claim 18 wherein the error analysis module is further configured to generate an error message on the control panel if a particular printer error has occurred twice within the predetermined time period.

20. (Original) A printer as recited in claim 18 wherein the error log stores a date and time that the printer error occurred.

21. (Original) A printer as recited in claim 18 wherein the error log stores an error type associated with the printer error.

Application No. 10/002,003

22. (Original) A printer as recited in claim 18 wherein the error log stores information regarding the print job being processed when the printer error occurred.

6   Application No. 10/002,003
